

THE EFFECTIVE PRECEPTOR SERIES

The Association of Professors of Gynecology and Obstetrics (APGO)

Introduction to Preceptorship & Preceptors

Roots of Preceptorship: Community-Based Teaching

What is Community-Based Teaching?

Community-based teaching is the teaching of a resident or student by a medical provider, or preceptor, in an office environment. Preceptorships are successful because they are founded in community-based teaching, the roots of medical education.

This simple concept greatly impacts the learner's experience and benefits the medical provider, as well. The one teacher/one learner/one patient relationship creates educational cognizance, where the learner experiences and learns from:

- Role modeling;
- Effective assessment;
- Immediate feedback; and
- Meaningful evaluation.

Why is Community-Based Teaching Important?

Through community-based teaching, role modeling that cannot be replicated in other, larger medical settings benefits the learner and maximizes his/her learning experience. An office setting provides excellent educational opportunities with one-on-one teaching. Because of these and other benefits, community-based teaching is quickly becoming the choice method for resident education.

How Good is Community-Based Teaching?

Learners in an office-based teaching environment gain educational experiences that are more reflective of real-world medicine than can be afforded from the hospital educational setting. Compared with hospital-based clinics, students participating in community learning see more patients, manage a greater variety of patient complaints, give more acute care and perform a greater number of procedures.

Who Are Preceptors?

Most often, preceptors are medical providers who are teaching physicians without full-time academic appointments, but preceptors can also be full-time academic physicians. A key characteristic of preceptors is that they deliver care in office settings, not in hospitals.

What Can a Physician Provide a Learner?

Medical providers who are preceptors in a community-based teaching environment offer precisely what learners want: practical skills. Usually in less than a five-minute teaching moment, learners focus on the patient and his/her problem rather than discuss an abstract topic and get to participate in developing a practical conclusion to the problem. Students also appreciate the level of independence in delivering care. Of most value, perhaps, is the benefit students derive from watching the preceptor manage a medical problem, improving their own communication skills and honing clinical skills, and only the preceptor-learner relationship can produce such learning opportunities.

How Does the Preceptor Benefit?

Most often, the benefits to the preceptor cannot be recorded or deposited. Preceptors continually state that precepting brings back the joy of clinical practice, and many say they feel as though they are giving back to the profession. Preceptors feel less isolated and enjoy the reward of sharing their knowledge. Not only does the learner improve clinical skills, but preceptors also report that they, too, benefit from reviewing the basics and seeking new knowledge. Preceptors can also benefit their practices by recruiting medical professionals with whom they've worked day-to-day.

What Do Learners Expect From Their Preceptorship?

Students are clear about what they want from their learning experience: the chance to manage patients' cases, experience in collecting basic data and improvement in their interpretation skills with the different cases they experience in an office environment. Learners want their preceptors to encourage independence in their students. Other characteristics that learners value in their preceptors include the preceptor's desire to solve problems, to be an enthusiastic physician and to engage in the learning process.

What Are the Costs to the Preceptor?

While the physician's time and lost billings are most often cited as costs of precepting, many physicians note that productivity and revenue are not at all affected. The physician can probably expect about a one-hour workday increase for each half-day spent in teaching. One study stated that well over one-half of the physicians participating experienced no reduction in income. Another survey reported that physicians might see one fewer patient for each half-day spent teaching.

How Are Patients Impacted?

Aside from questions of lost income, many physicians are concerned that quality of care and patient satisfaction will drop, resulting from having students present in their medical practices. The opposite seems to be true. In a study of HMO practices, 90% of the physicians reported that quality of care and satisfaction were not affected. Studies of private practices yield similar results. Many patients say they enjoy the extra attention from learners, even when the learner repeats part of the examination.

The Effective Preceptor

A literature review indicates the effective preceptor demonstrates:

Communication Skills

- Possesses and demonstrates broad knowledge
- Explains the basis for actions and decisions
- Answers learner questions clearly and precisely
- Open to conflicting ideas and opinions
- Connects information to broader concepts
- Captures learners attention
- Makes learning fun

Careful Analysis of the Learner

- Accurately assesses learner's knowledge attitudes and skills
- Uses direct observation of the learner
- Provides effective feedback
- Performs fair and thoughtful evaluations

Skill in Practice and Teaching

- Provides effective role modeling
- Demonstrates skillful interactions with patients
- Presents information with organization and clarity
- Generates interest in the subject matter
- Organizes and controls the learning experience
- Balances clinical and teaching responsibilities
- Give appropriate responsibility to the learner

Motivation of the Leader

- Emphasizes problem solving
- Translates specific cases into general principles
- Promotes active involvement of the learner
- Demonstrates enjoyment and enthusiasm for patient care and teaching
- Develops a supportive relationship with the learner

What is Preceptorship?

The word “preceptor” means teacher or instructor. In the medical profession, preceptorship, then, is defined as a time of practical, real-world training for a medical student or resident, who is supervised by a preceptor – the teaching physician.

Tell Me More!

Students and residents in preceptorships usually work in smaller, community-based medical offices. Other differences from hospital settings include the level of one-on-one involvement between medical provider and student, responsibilities and independence of the student, extent of practical skills obtained and benefits to the medical provider.

The Effective Preceptor Series is a project of the Association of Professors of Gynecology and Obstetrics (APGO) Undergraduate Medical Education Committee (UMEC):

Maya M. Hammoud, MD, Weill Cornell Medical College, Qatar, Chair; Petra Casey, MD, Mayo Clinic College of Medicine; Sandra L. Emmons, MD, Oregon Health & Science University; Eve L. Espey, MD, MPH, University of New Mexico; Alice R. Goepfert, MD, University of Alabama at Birmingham; James J. Neutens, PhD, University of Tennessee, Knoxville; Francis S. Nuthalapaty, MD, University of South Carolina-Greenville; Nadine T. Katz, MD, Albert Einstein College of Medicine; Edward (Ted) Peskin, MD, University of Massachusetts; and Joseph M. Kaczmarczyk, DO, MPH, Uniformed Services University.

This series is made possible through an educational grant to the APGO Medical Education Foundation from Solvay Pharmaceuticals, Inc.

Introduction to Preceptorship & Preceptors, #1 in a series,
© The Association of Professors of Gynecology and Obstetrics, 11/2006.

The Association of Professors of Gynecology and Obstetrics (APGO) promotes excellence in women's health care by providing optimal resources and support to educators who inspire, instruct, develop and empower women's health care providers of tomorrow.

This publication is part of the APGO Effective Preceptor Series – a group of pamphlets intended to educate practitioners and learners about the apprentice system or preceptorship. The quality of learning that occurs in an established relationship between the teacher and the student often meets the challenge of educating physicians in today's chaotic health care environment. It allows doctors in training to practice as much like doctors as good medical practice will allow...and it provides a setting in which some of the best medical education in our nation takes place.
